

Photosimulation 1A: Normal view from Myron Avery Peak on the Appalachian Trail, looking south to southeast toward the proposed Highland Wind Project. Turbines visible from this location would be between 7.7 to 14.3 miles away. Six of the 44± turbines visible from this location would be within 8 miles of the viewer. Viewer should hold 11"x17" print approximately 17" from eye to replicate actual view.

Photosimulation 2A: Normal view from the eastern summit of Little Bigelow Mountain on the Appalachian Trail, looking east to southeast toward the proposed Highland Wind Project. Turbines visible from this location would be between 4.3 to 10.9 miles away. Viewer should hold 11"x17" print approximately 17" from eye to replicate actual view.
