

# America's Energy and Environmental Future is in Our Hands.

Right now, Congress is working to develop legislation to save energy, improve our energy security, and address climate change in the most cost-effective way. This can help create an estimated **1.7 MILLION JOBS** across the United States – **CLEAN ENERGY JOBS IN EVERY STATE IN OUR COUNTRY.**

Legislation is needed to secure our country's energy supply while capping and reducing greenhouse gas emissions through a robust, market-based approach. Climate change is real and the longer we delay taking prudent action, the higher the cost for future generations. Legislation is our best opportunity to get a low cost, effective national response this year.

It's an American solution to a global economic and environmental challenge. That's why leading business, labor, and environmental advocates have joined together to support critical national legislation. Working together, we can do it, and create more jobs while we do so.

**We call on the Senate to pass clean energy legislation with a cap on greenhouse gas emissions this year.**
