

85% of Mainers Support Windpower Projects in Maine

The Maine Land Use Regulation Commission is considering several multi-million dollar proposals for wind development projects in the Unorganized Territories of Maine.

Supporters say that wind development is good for Maine because it promotes renewable energy.

Opponents say that the wind development projects will be bad for Maine because they may negatively impact Maine's landscape.

Do you favor or oppose the development of wind power projects in Maine? Is that strongly or somewhat favor/oppose?
