Earlier this year, Maine lawmakers came very close to passing a bi-partisan solar energy bill that was supported by a broad coalition of solar energy companies, electric utilities, environmental groups, town officials, and Maine’s official ratepayer advocate.

The governor vetoed the bill and an effort by lawmakers to overturn the veto fell just a couple votes short. Maine lawmakers are expected to seek passage of a similar bill next year to increase solar power in Maine.

Would you support or oppose passage of such a bill to increase solar energy next year?

Again on the question of solar energy, decision-makers in Augusta currently are considering a proposal to phase out a long-standing policy known as 'TOTAL metering.' The proposed phase-out of net metering would make solar energy less affordable for Maine homeowners and businesses. Please tell me whether you support or oppose this proposal to weaken Maine's existing net metering solar energy policy.

Change Maine's mining regulations to make it easier for mining companies to build open-pit mines, but with the likely result that water pollution would increase and taxpayers would end up covering cleanup costs.

Recently, you may have noticed that there has been news coverage about the Earth's warming climate. Global warming refers to the fact that the world's average temperature has been increasing over the past 150 years, changing the earth's climate. Please tell me when you think global warming will start to have harmful impacts in Maine? Would you say...

10. Maine currently is part of a cooperative program among nine Northeast states that sets a limit on the amount of climate-changing carbon pollution that power plants can release, and provides money to help homes and businesses in Maine become more energy-efficient. The states are now deciding on the pollution limit for future years. There is a proposal to require power plants in the region to decrease the amount of carbon pollution they release by FIVE percent every year, beginning in 2020. Most companies have been decreasing pollution by this amount already, and under this proposal, they would be required to continue doing so. Would you support or oppose this proposal for pollution limits in future years?
