

The Cross-State Air Pollution Rule *Health and Economic Benefits for Maine*

To protect states afflicted by air pollution from outside their borders, EPA finalized the Cross-State Air Pollution Rule (CSAPR) to reduce harmful emissions of sulfur dioxide (SO₂) and nitrogen oxides (NO_x) from power plants in the eastern half of the U.S. These clean air protections are called for under the “Good Neighbor” provision of the Clean Air Act – a provision ensuring that air pollution discharged by power plants in an upwind state do not contribute to unhealthy pollution levels in downwind states. These protections will help downwind states suffering from this harmful pollution restore healthy air for their citizens and maintain compliance with the health-based national ambient air quality standards.

Under this rule, harmful pollution will be significantly reduced: SO₂ emissions from power plants in the eastern half of the U.S. would be reduced 73% and NO_x emissions would be reduced 54%. Nationally, this rule will save up to 34,000 lives, prevent 400,000 asthma attacks, and avoid 1.8 million lost work or sick days each year once in place. The economic value of these benefits is estimated at \$120–280 billion each year. These benefits don’t even account for the value of increased agricultural crop and commercial forest yields, improvements to visibility, and reduced nitrogen and acid deposition.

Mainers will reap vital health benefits from this rule.

Maine has no emissions reductions requirements of its own under the CSAPR, but will see substantial health and environmental benefits due to pollution reductions from upwind states. The pollution reductions made by states that are covered by the rule will save lives in Maine and will provide about \$490 million¹ in benefits to Maine each year. These benefits are just those related to avoided mortality, but there are other important health and environmental benefits not quantified here. Under these clean air protections, the quantified health benefits for Maine are about what the state spent on health in 2009²—in other words, this nearly half a billion in dollars in health benefits is very good news for Mainers.
